

ADEBAYO DANIEL O.

SOFTWARE ENGINEER | FULL-STACK | GOLANG | REACT/NEXT.JS

Email: <mailto:madebayooluwasegun011@gmail.com> | Phone: +234 807 197 9393 | GitHub: <https://github.com/Master-Daniels> | [Website](#)

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5+ years of experience building scalable, production-grade applications across FinTech, Web3, EdTech, and SaaS. Strong expertise in React, Next.js, TypeScript, and Golang, with additional experience in Python, Node.js and PHP. Experienced in designing scalable backend services, concurrent systems, data-intensive applications, and secure financial platforms serving hundreds of thousands of users. Strong focus on system design, performance optimisation, clean architecture, and delivering reliable software in production environments.

CORE COMPETENCIES

- Frontend: React.js, Next.js, Svelte, TypeScript, Tailwind CSS, Shadcn UI, React Query, Jest
- Mobile: Flutter, Dart, React Native
- Backend: Golang (Gin, Fiber, Goroutines, Channels), Node.js (Express, Hono), Python (FastAPI, Django), PHP (Laravel)
- APIs & Architecture: REST, GraphQL, Microservices, System Design, Clean Architecture, Concurrent Programming
- Databases: PostgreSQL, MySQL, MongoDB, Redis
- Blockchain & Web3: Solidity, Ethers.js, Wagmi, Smart Contracts, Cryptography, Protocol Integrations
- DevOps & Tools: Docker, GitHub Actions, Linux, Nginx, AWS, Git, Postman, Jira, Notion
- Computer Science: Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks

PROFESSIONAL EXPERIENCE

LEAD ENGINEER — SupportScope | Remote | April 2026

- Designed and implemented integrations with customer support platforms, including Crisp, to ingest and normalize high-volume, real-time conversation streams.
- Built and launched SupportScope's official Crisp integration and published it to the Crisp Marketplace, enabling seamless onboarding for external customer support teams.
- Architected a scalable, multi-tenant backend infrastructure with secure customer data isolation and support for high-throughput workloads.
- Integrated AI-driven analytics pipelines to extract actionable insights from customer conversations, including sentiment trends, performance metrics, and behavioral patterns.
- Developed conversation-clustering algorithms to group interactions by common themes, enabling pattern discovery and automated prioritization of customer experience improvements.

- Improved system performance and reliability through automated testing, monitoring, and iterative optimization of production services.

SOFTWARE ENGINEER — Zine Wallet | FinTech & Digital Payments | Remote | April 2025 – April 2026

- Developed cross-platform mobile applications using Flutter and Dart, delivering financial products and experiences across iOS and Android.
- Built responsive web applications using React, TypeScript, Tailwind CSS, and Vite, with a focus on reusable and maintainable frontend architecture.
- Integrated web and mobile applications with backend APIs and financial services, delivering features across multiple platforms.
- Collaborated with product and engineering teams to design, develop, test, and refine digital payment features with a focus on performance, usability, and accessibility.

FULL-STACK ENGINEER — Bitpowr | Institutional-Grade Digital Assets Infrastructure | Remote |

August 2023 – December 2024

- Led frontend development for data-intensive FinTech dashboards using Next.js, React, TypeScript, and Tailwind CSS, supporting 400K+ accounts.
- Developed and integrated backend services, GraphQL APIs, and PostgreSQL data systems supporting scalable financial applications and high-volume transaction workflows.
- Built critical security and compliance features, including AML/KYT modules, contributing to the processing of 2M+ secure transactions.
- Improved application architecture, performance, and user experience across complex financial dashboards and internal systems.
- Collaborated with engineers, developers, product teams, and business analysts to design and deliver scalable in-house solutions.

SOFTWARE ENGINEER — Unihive Africa | Remote | February 2020 – Present

- Built and continue to develop a computer-based testing (CBT) platform used by 3+ African universities and 25K+ students, using React, PHP, and MySQL.
- Optimized complex result-calculation queries, reducing average report-generation time from 12 seconds to under 2 seconds.
- Developed functionality for rendering complex mathematical and scientific notation for courses including Mathematics, Chemistry, and Physics.
- Implemented role-based access control and real-time proctoring features, improving platform reliability and examination integrity during peak exam periods.
- Contributed to the evolution of the platform's architecture and features from development through production deployment and ongoing maintenance.

FREELANCE SOFTWARE DEVELOPER

Various Projects

- Delivered 12+ production-grade full-stack applications spanning FinTech dashboards, e-commerce platforms, SaaS products, and AI-integrated applications.
- Worked directly with clients and stakeholders to translate product requirements into scalable, maintainable software solutions.
- Designed and implemented frontend applications, backend services, APIs, database systems, and third-party integrations across multiple technology stacks.

EDUCATION

FEDERAL UNIVERSITY LOKOJA — Kogi State, Nigeria

B.Sc. Computer Science | Second Class Upper | CGPA: 4.25/5.0

Graduated: 2024

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, System Design

CERTIFICATIONS & ACHIEVEMENTS

- Andela × Google Hackathon 2023 — Golang Category
- Zuri/HNG Internship Finalist — 2019 & 2020
- Udacity Nanodegree Scholarship Awardee

ADDITIONAL

- Currently learning Rust with a focus on systems programming and performance-oriented software development.
